Projects

Agentic News-Driven Investor View Generation with Correlation-Aware Signal Aggregation for Black-Litterman Portfolio Optimization

[QRAFT Technologies](#)

Agentic AI, Black-Litterman Model, Portfolio Optimization

Oct. 2025 - Feb. 2026

- Built an agentic AI system that analyzed news and generates investment views with explainable reports across multiple asset classes, integrated into a live fund product
- Modeled inter-article correlations using GLS to aggregate news signals, prioritizing high-confidence articles while preventing the same event reported by multiple sources from being over-counted
- Converted aggregated signals into asset-specific expected returns and uncertainty estimates, used as inputs to the Black-Litterman model for portfolio optimization

Towards Efficient Code Generation with LLMs: Next Generation Metrics and Preference Optimization | [PDF](#)

[Seoul National University](#)

LLMs for Code, Preference Optimization, DPO, CPO, IPO

Nov. 2024 - Dec. 2024

- Proposed a novel efficiency metric for code-generating LLMs using CDF of the runtime distribution for robust evaluation
- Improved a preference dataset to fine-tune LLMs for both functional correctness and runtime efficiency

RefineIT: Visual Analytic Tool for Analysis and Refinement of Image-Text Dataset | [Source](#)

[Seoul National University](#)

XAI, LMM, Transformers, FastAPI, D3.js, React

Nov. 2023 - Dec. 2023

- Served multiple large multimodal models, including Vision-and-Language Transformer (VILT), CLIP, and BLIP
- Developed a dynamic dashboard visualizing AI-driven analytics responding to user interactions

GPU Cluster Management

[Seoul National University](#)

Linux, Ansible, Slurm, LDAP

Sep. 2023 - Jun. 2025

- Managed the end-to-end lifecycle of the GPU cluster, from procurement and installation to the ongoing maintenance of all GPU servers and storage servers (about 200 GPUs)
- Designed and implemented resource allocation and scheduling policies using Slurm to ensure fair and efficient resource distribution among users

Center for Applied Research in AI (Agency for Defense Development, ADD)

[Seoul National University](#)

Benchmark Dataset, Data generation, VQ-VAE, Diffusion model, Data augmentation, Federated Learning

Aug. 2022 - Jun. 2025

- Developed and established a benchmark to evaluate the performance of AI models on defense-related tasks
- Enhanced defense datasets by applying generative models (DALL-E, Stable Diffusion) and policy-based data augmentation
- Published three papers at domestic conferences
