Projects

Towards Efficient Code Generation with LLMs: Next Generation Metrics and Preference Optimization | [PDF](#)

Seoul National University

LLMs for Code, Preference Optimization, DPO, CPO, IPO

Nov. 2024 - Dec. 2024

- Proposed a novel efficiency metric for code-generating LLMs using CDF of the runtime distribution for robust evaluation
- Improved a preference dataset to fine-tune LLMs for both functional correctness and runtime efficiency

GPU Cluster Management

Linux, Ansible, Slurm, LDAP

- Managed the end-to-end lifecycle of the GPU cluster, from procurement and installation to the ongoing maintenance of all GPU servers and storage servers
- Designed and implemented resource allocation and scheduling policies using Slurm to ensure fair and efficient resource distribution among users
